AIMS AND SCOPE

Human Psychopharmacology aims to communicate the results of clinical and experimental studies relevant to the understanding of new and established psychotropic drugs. To this end the journal publishes articles on the following topics:

- ★ Experimental human psychopharmacology
- ★ Efficacy studies in humans, especially large-scale and placebo controlled trials
- ★ Volunteer studies
- ★ Relevant animal studies
- ★ Effects of psychotropic drugs on physiological systems, including unwanted effects
- ★ Psychotic drug use and dependence
- ★ Broader ethical psychological and sociological aspects of drug use, misuse and abuse

The content of *Human Psychopharmacology* comprises *Original articles, Short communications* (not exceeding 1500 words), *Reviews* and *Comments* by leading authorities with discussion by other experts, papers on *Practical therapeutics*, report of *International meetings, Book reviews, Correspondence* and *Diary*.

EDITORIAL POLICY

The Editors' policy is to encourage and publish contributions on all aspects of human psychopharmacology. *Human Psychopharmacology* is a multidisciplinary journal and articles dealing with the broader aspects of pharmacology in a social and clinical setting are welcomed. All original articles and short communications are strictly refereed and only studies meeting acceptable ethical standards governing experimentation on animals and man will be considered. Proceedings of meetings and symposia that meet strict editorial criteria may be published as supplements to the journal.
Human Psychopharmacology aims to publish contributions within three to six months of final acceptance.
